NEWS RELEASE

ELECTRIC METALS COMMENCES EXPLORATION AT CHUCHINKA REE-CARBONATITE PROPERTY

VANCOUVER, B.C. June 24, 2011 – ELECTRIC METALS INC. (TSX-V: EMI) (the “Company”) is pleased to announce it has commenced exploration on the Chuchinka REE-Carbonatite property, located in the Wicheeda-Carbo district north of Prince George, British Columbia.

Phase 1 exploration has commenced to define drill targets within several anomalies discovered by Electric Metals with an airborne geophysical survey in 2010. The largest of these targets, measuring over 4 km by 1 km, is located near the centre of the property and is defined by a broad magnetic low associated with coincident conductive anomalies. Geochemical sampling of soils and bedrock, together with ground-based geophysics in the form of precision magnetometer and scintillometer surveying, are being applied to identify the most prospective portions of this and other targets.

Phase 2 exploration consisting of trenching and drilling will follow upon receipt of results of the Phase 1 program.

Electric Metals Inc. is also pleased to announce the launch of its updated and completely redesigned website. The Company's management team and Board of Directors invite you to visit www.electricmetalsinc.com to see the new face of EMI and learn about recent accomplishments and current activities.

About Electric Metals Inc.

Electric Metals is a Canadian junior mining company focused on exploration for rare earth elements, with properties in two leading Canadian REE exploration districts. Electric Metals has an option to earn a 75% interest in the Chuchinka property, located 80 km north of Prince George, British Columbia, from International Montoro Resources Inc. (TSX-V: IMT). The Chuchinka property is contiguous with the Wicheeda and Carbo rare earth discoveries, operated by Spectrum Mining Corporation (a private company) and Canadian International Minerals Inc. (TSX –V: CIN) respectively.

The Abitibi properties are located in the Montviel area of Quebec and control most of the major syenite complexes that surround Geomega's (TSX-V: GMA) Montviel syenite-carbonatite complex. Electric Metals has the option to acquire a 100% interest in the Abitibi properties.
